

Savya Sanchi Sharma

Software Development Engineer II | React • Node.js • Full-Stack

savyaofficial97@gmail.com • +91 9617080650 • virtualsavya.netlify.app

Full-Stack Engineer with 6+ years building scalable, accessible web applications. Currently at IQVIA delivering end-to-end features for clinical data platforms using React.js and Node.js. Strong expertise in React component architecture, REST API development, state management, and agile delivery. Proven collaborator who translates complex business requirements into clean, well-tested, production-grade code.

TECHNICAL SKILLS

Frontend: React.js, Hooks, Redux, Context API, JavaScript ES6+, TypeScript, HTML5, CSS3 **Backend:** Node.js, Express.js, RESTful APIs, GraphQL

Prior Stack: Angular v14+, RxJS, HttpClient **Databases:** PostgreSQL, MongoDB, MySQL

Testing: Jest, React Testing Library, Cypress **Tools & Practices:** Git, CI/CD, Agile/Scrum, Figma, WCAG 2.x, SASS/LESS, Vite

WORK EXPERIENCE

Software Development Engineer II

IQVIA • Apr 2026 – Present

- Building full-stack features for clinical and life sciences data platforms using React.js (frontend) and Node.js (backend) — delivering end-to-end functionality from UI components to API services.
- Developing scalable React applications with Hooks, Context API, and reusable component libraries; ensuring performant, accessible, and responsive user interfaces across complex data-driven workflows.
- Building and maintaining RESTful Node.js/Express.js APIs that power frontend data flows; collaborating with backend and data engineering teams to define contracts and ensure reliable integration.
- Writing clean, well-tested full-stack code — unit tests (Jest, React Testing Library), API integration tests, and end-to-end coverage as part of CI/CD-enforced quality gates.
- Collaborating cross-functionally with product managers, designers, and backend engineers in agile sprints — translating complex business requirements into robust, user-friendly technical solutions.

Senior Frontend Engineer

Aaseya IT Services • Jun 2021 – Apr 2026

- Built scalable React.js applications using Hooks, Redux, and Context API for state management — developed enterprise-grade component libraries and design systems used across multiple product surfaces.
- Developed Node.js/Express.js backend services and RESTful APIs; integrated frontend React components with data streams and API endpoints in a full-stack delivery model.
- Led React frontend architecture decisions — MFE patterns, SPA design, code splitting, lazy loading, and memoization — ensuring long-term maintainability and performance at scale.
- Translated wireframes and business requirements into high-quality React implementations; worked closely with UI/UX designers to deliver pixel-perfect, accessible interfaces.
- Championed WCAG 2.x accessibility standards — semantic HTML, ARIA, keyboard navigation — across all React component surfaces as a non-negotiable quality bar.
- Established testing practices: Jest unit tests, React Testing Library component tests, and Cypress E2E suites; integrated with CI pipelines to enforce coverage and quality gates.
- Mentored junior engineers through pair programming, code reviews, and knowledge-sharing workshops — raised team quality bar and shared React/Node.js best practices.

Frontend Developer

Tiot Systems Pvt Ltd • Jan 2020 – May 2021

- Built SaaS web interfaces using Angular, TypeScript, HTML5, and CSS3; developed reusable UI components with RxJS, lazy-loaded modules, and focus on cross-browser compatibility and responsive design.
- Consumed RESTful APIs using Angular's HttpClient with async/RxJS

PROJECTS

MoneyStack

Next.js • Node.js • GraphQL • PostgreSQL

- Full-stack finance app — Next.js React frontend with a Node.js backend exposing GraphQL APIs; clean separation of UI, API, and data layers with thoughtfully designed PostgreSQL schemas.
- Reusable React component library with atomic design principles; TDD throughout with Jest, React Testing Library, and CI quality gates.
- Optimised for performance — SSR with Next.js, code splitting, lazy loading, and responsive mobile-first design across all devices.

Matchifyy

React • TypeScript • Node.js • MongoDB

- Matching platform with a React + TypeScript frontend and Node.js REST backend — Redux for global state, custom Hooks for data-fetching logic, and MongoDB for flexible data modelling.
- End-to-end tested with Cypress; Node.js API routes optimised based on real usage patterns for low-latency responses.
- Pragmatic, iterative delivery — shipped core value early, evolved architecture based on measured user behaviour.

EDUCATION

B.E. – Electronics & Communications

Bhilai Institute of Technology, Durg

2015 – 2019

CERTIFICATIONS

Introduction to Claude Coworker • *Anthropic*

patterns; debugged full-stack integration issues and collaborated closely with backend developers to align on data contracts.

Digital Marketing Manager

Tiot Systems Pvt Ltd • Aug 2019 – Dec 2019

- Developed landing page assets using HTML, CSS, and JavaScript; produced campaign creatives with Photoshop and analysed performance data to identify conversion optimisation opportunities.
